

Startup and Middleware

Scott Allen

@OdeToCode - <http://OdeToCode.com>

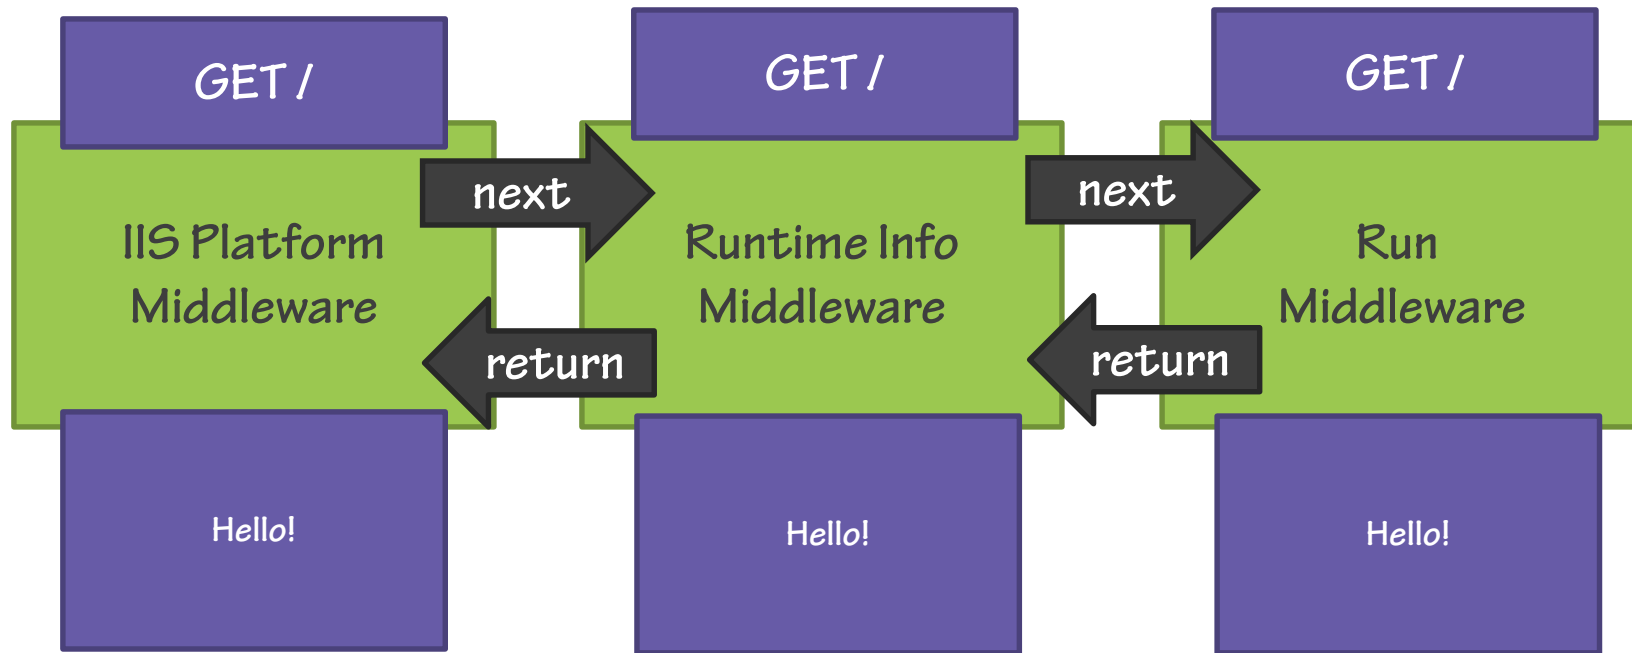

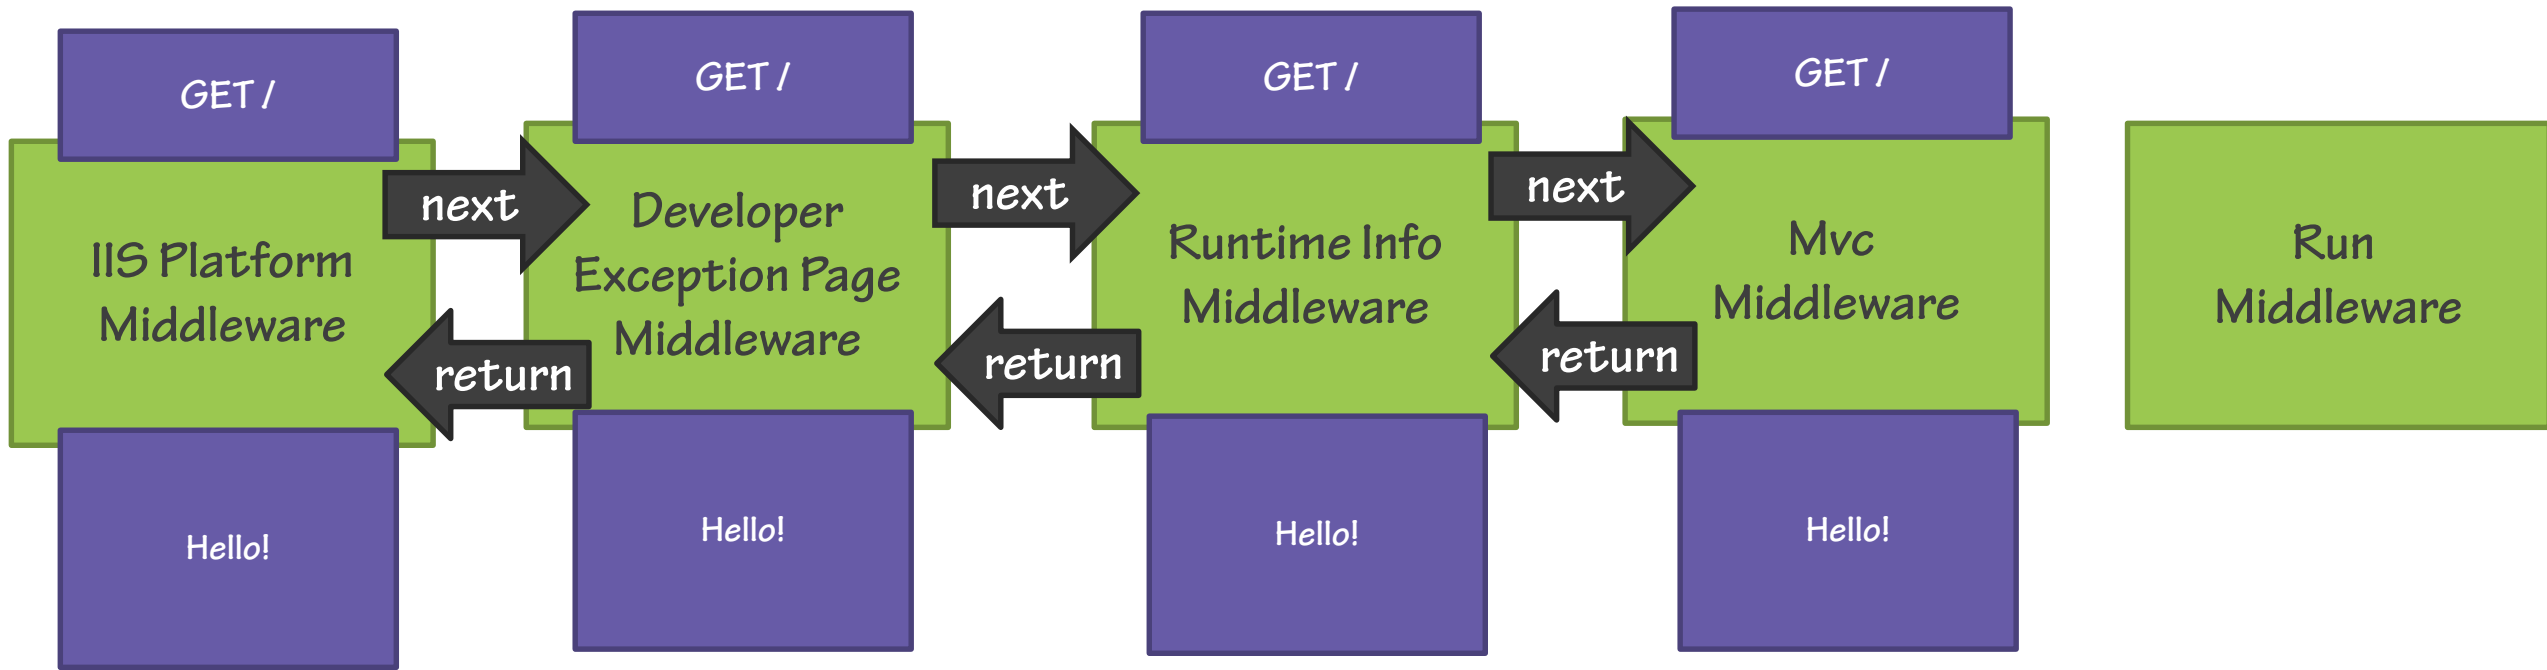

Middleware and IApplicationBuilder

```
public void Configure(  
    IApplicationBuilder app,  
    IGreeter greeter)  
{  
    app.UseIISPlatformHandler();  
  
    app.Run(async (context) =>  
    {  
        var greeting = greeter.GetGreeting();  
        await context.Response.WriteAsync(greeting);  
    });  
}
```

Setting up ASP.NET MVC

1. Add the
package
dependency

2. Add the MVC
services

3. Add the MVC
middleware

Summary
